

ENFLECTION

powered by **Trihydro**

A Turning Point for Your Environmental Data Management

EnFlection is a powerful platform for environmental projects, supporting teams and stakeholders with the right tools for workflow, analysis, key performance indicator tracking, and reporting. EnFlection features an intuitive interface and a secure platform backed by decades of environmental expertise that can help you achieve your business goals. With EnFlection, you can manage data for one project or your entire environmental site portfolio, including data related to:

- Groundwater
- Surface water
- Remediation
- Stormwater
- Leachate
- Soil sampling
- Waste characterization

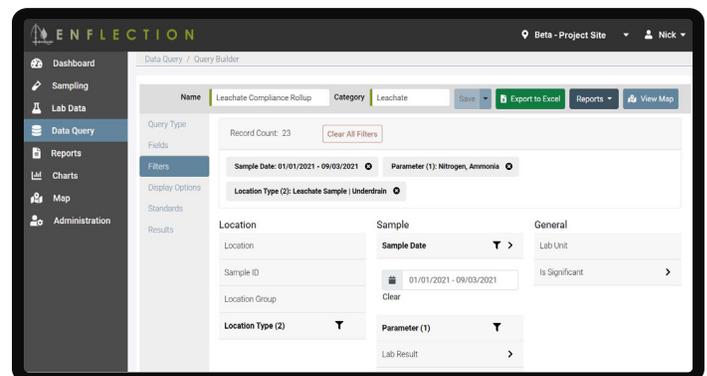

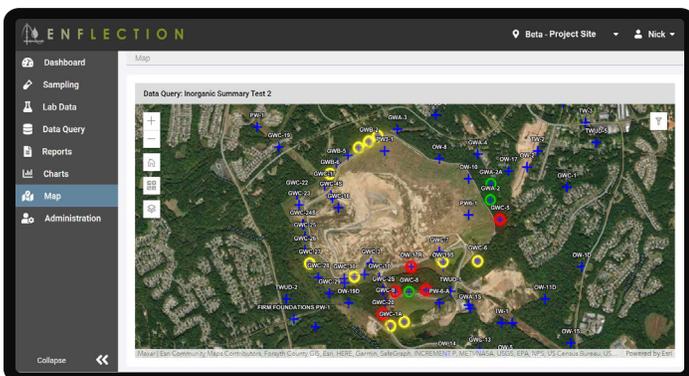

EnFlection is a hub for data analytics and compliance reporting, helping you manage project needs and regulatory expectations, such as those surrounding the Resource Conservation and Recovery Act (RCRA), National Pollution Discharge Elimination System (NPDES), Environmental Protection Agency (EPA) Regional Screening Level (RSLs), EPA Maximum Contaminants Level (MCLs), and more.

VISIBILITY & ACCESSIBILITY

- “System of Record” - Team members can collaborate using the same up-to-date project data
- Visibility into project activity, data, and key performance indicators
- Download datasets to Excel for analysis or upload to other systems
- Browse project data geographically with maps
- View critical data cross your environmental site portfolio

WORKFLOW & NOTIFICATION

- Track the status of incoming project data and be notified of uploads
- Sample planning and sample validation assure only necessary data are collected
- Export-Import operations for data QC and integration with statistical applications
- Data-load workflow assures data is correctly loaded and consistent with preceding datasets

Continued on reverse.

SECURITY & RELIABILITY

- Cloud-hosted on Microsoft Azure, the most secure platform available
- Role-based authorization assures that only designated team members can modify project data
- Two-factor authentication keeps your data secure
- Single-sign-on (SSO) can be configured for enterprise customers
- Continuous data backups support disaster recovery
- Unlimited scalability for your enterprise environmental data management (any volume of data for any number of sites)
- Project data always belongs to the customer and is always available for download

DATA QUERY & VISUALIZATION

- Query data by selecting any combination of filters and fields and then export filtered results to Excel
- Convert data to any applicable unit and assemble datasets with environmental parameters in either columns or rows
- Compare project data to common and customizable standards
- Share queries with your team
- Use queries to create repeatable tables (PDF), charts, and maps for routine regulatory reports

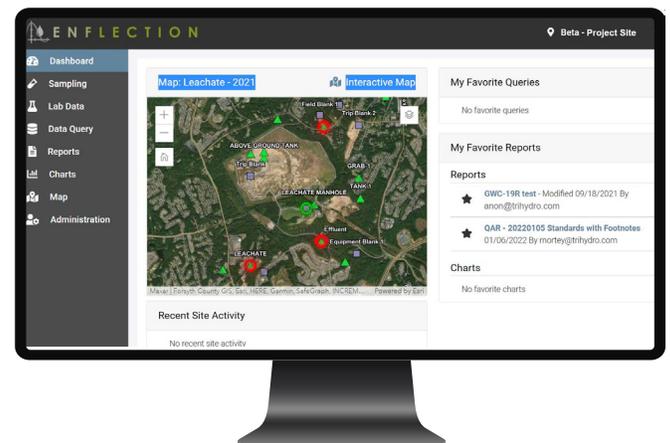

EASE OF USE

- User-friendly interface presents complex data intuitively
- Modern web design and responsive layout maximize the screen space available on your device for easy viewing
- Designed according to Web Content Accessibility Guidelines (WCAG) 2.1 accessibility principles and techniques
- Compatible with modern web browsers
- Expert training and support are always available

Ready for a turning point in your environmental data management?

Getting started is easy:

1. We schedule a demo with your key stakeholders.
2. You tell us about your environmental sites (projects), sampling, applicable standards, and analysis and reporting needs.
3. We set up your site and database, accessible to only your users.
4. We review, validate, and import site and historic environmental data into EnFlection.
5. We invite your specified users to join the platform.
6. We configure your preferred notifications.
7. We train your team how to use EnFlection.
8. Your team works confidently and efficiently, backed by our expert support.
