# LEAKTRACKER**PRO**

powered by **Trihydro**

Trihydro's LeakTracker Pro® is a stand-alone software solution designed to help upstream and midstream oil and gas companies survey, track, and report GHG and VOC emissions data as required by the EPA.
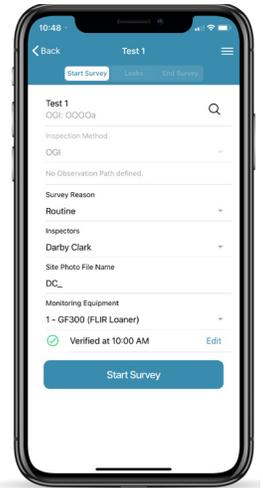

Background

On June 3, 2016, the U.S. Environmental Protection Agency (EPA) issued a final New Source Performance Standard (NSPS) Subpart OOOOa to reduce greenhouse gases (GHG) and volatile organic compounds (VOCs) from new, reconstructed, and modified sources located in the "crude oil and natural gas source category." The rule targets affected compressor stations and well sites for fugitive emission surveys on a fixed schedule.

To comply with the rule and manage the required timeframes, several layers of data (e.g., meteorological conditions, equipment documentation, and leak and repair details) must be collected, reported, and archived. To address the data management and recordkeeping requirements of NSPS OOOOa and state-specific regulations, Trihydro developed a cloud-based software solution called LeakTracker Pro.

LeakTracker Pro®

LeakTracker Pro automates survey and leak data collection to support compliance tracking, verification, and electronic regulatory reporting. LeakTracker Pro is an easy-to-use application that follows the necessary workflow to maintain regulatory compliance while reducing time spent crunching numbers, maintaining schedules, and compiling data.

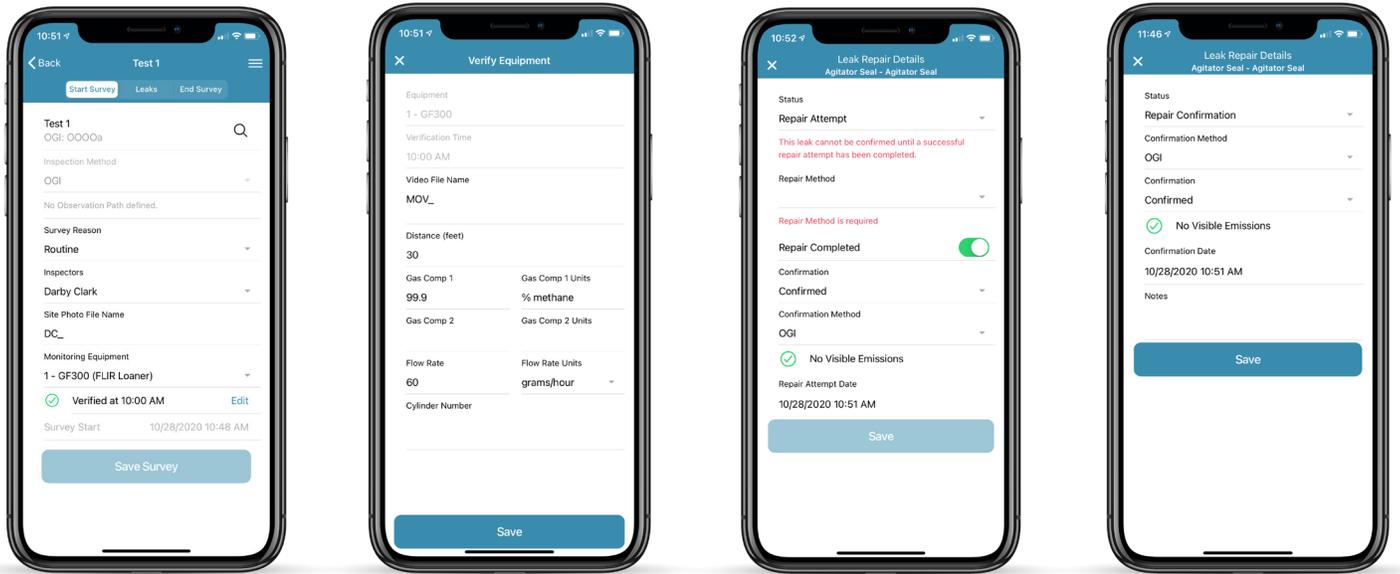

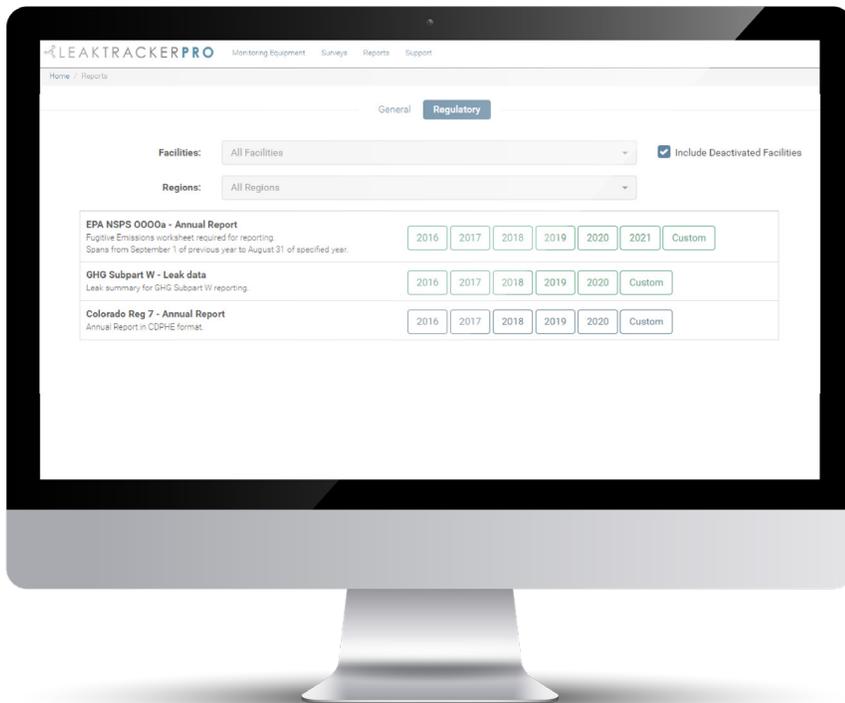

Capabilities

- Track facilities in a company-defined area or asset management group, depending on organizational structure.

- Intuitive methods for facility operators, maintenance, and OGI operators to input data.

- Manage existing leaks, delay of repair components, and scheduling to ensure leaks are repaired and repair confirmations are conducted within required timeframes.

- Increase emissions compliance program efficiency and eliminate recordkeeping gaps and errors at the field level.

- Access data from any location with internet connectivity, collect data with no connectivity, and securely archive collected data.

LeakTracker Pro is designed to create efficiencies and maintain regulatory compliance, saving you time and money.

Trihydro

Trihydro's LeakTracker Pro® is a stand-alone software that runs on iOS and Android devices. A simple user interface enables field teams to easily collect the necessary data to maintain compliance.

The field application synchronizes data to the website, which enables your team keep track of critical dates, inspections, and repairs, as well as analyze trends and communicate information corporate-wide.

A variety of on-demand reports help relay critical information to your team, and state- or EPA-formatted annual reports can be generated with a click of a button.
